Looking for TV footage to illustrate the themes debated by the Council?

Session of the Council of the European Union
- Transport, Telecommunications and Energy -
Brussels, 28 February 2008

This is a non-exhaustive list of video footage available from the Media Libraries of the European Parliament and the European Commission Audiovisual Services. They cover themes debated by the Council and are published as a guide for TV journalists looking for relevant archive pictures.

AVAILABLE BROADCAST MATERIAL

ON ENERGY (energy technologies)

From the EUROPEAN COMMISSION Media library:

- **VNR: Capturing Carbon, a new front in the fight against climate change**

Global warming is one of the biggest issues of our time. To meet the targets set for reducing CO2 emissions, it's widely accepted that new technology will play an important role sometimes as a "bridging technology"- while alternative sustainable energy sources are being developed. One of the most promising technologies is Carbon Capture and Storage (CCS). This a means of capturing CO2 from sources such as power plants, compressing the CO2 and storing it away safely in geological formations underground or under the seabed instead of releasing it into the atmosphere. The video report shows: A CCS project under construction at a lignite power plant run by the energy company Vattenfall at Schwarze Pumpe, south of Berlin, An EU backed carbon storage project at Ketzin in Germany, A North Sea oil field run by the Norwegian company Statoil which was the first place in the world to begin CCS on a commercial basis, How both the EU and the US are working hard to develop the Carbon Capture and Storage technology.
