No. Cion doc.: 8531/18 TELECOM 113 PI 48 RECH 156 MI 310 COMPET 266 DATAPROTECT 78 CYBER 80 IA 114 CODEC 674 + ADD 1-ADD 4

- Analysis of the final compromise text with a view to agreement

I. INTRODUCTION

1. The Commission issued the proposal on 26 April 2018 as part of the most recent package of legislative initiatives aiming at the completion of the framework for the Digital Single Market strategy (DSM) and as part of the regulatory fitness and performance (REFIT) programme. The March 2018 European Council has set the deadline to deliver the DSM until the end of the current legislative cycle.
2. Following the presentation of the Impact Assessment on 22 May 2018 by the Commission, the Telecommunications Council Working Party held article-by-article examinations of the proposal on 12 June, 12 July, 4 September, 20 September and 4 October 2018. The TTE Council held a policy debate on 8 June 2018 on the Directive.

3. The mandate for opening negotiations with the European Parliament was granted by Coreper on 7 November, and the opening trilogue took place on 12 December.

4. In 2019 the Romanian Presidency had five technical meetings with the European Parliament on 7, 9, 11, 16 and 18 January. On 18 January, Coreper granted the Presidency a revised mandate to continue the negotiations.

5. The second trilogue was held on 22 January. During this trilogue the Council and the European Parliament came to an agreement on all political issues and successfully closed the negotiations.

6. In the Annex of this document Delegations will find the Proposal for a Directive on the re-use of public sector information updated according to the provisional political agreement reached at the second trilogue.

7. Delegations will note that the changes in the text of the Annex are marked as compared to the text of the mandate given by the Coreper on 18 January 2019 (doc. 05255/19 and doc. 05255-co01/19). Additions made in that text are marked with **bold underlined**, deletions with *strikethrough underlined*. 
II. MAIN ELEMENTS OF THE COMPROMISE

1. **High value datasets**

On the choice of the legal instrument for the establishment of the list of high value datasets, which are to be made available for free and via APIs, a hybrid solution consisting of both implementing and delegated acts has been confirmed in Article 13. There will be a list of broad categories of high value datasets in the Annex (e.g. Geospatial, Statistics etc.). This list of categories will be updated by means of delegated acts. However, the selection of specific datasets from within those categories (e.g. maps and postcodes from the category Geospatial) will be done by means of implementing acts. Some examples of high value datasets for each category have been added in Recital 58, together with a specification that these examples are purely illustrative and without prejudice to future implementing acts.

2. **Public undertakings**

As regards the extension of the scope to public undertakings, an additional safeguard has been added in Article 1(2)(b). It excludes from the scope of the Directive the data held by public undertakings which are related to activities directly exposed to competition and therefore exempted from procurement rules, in accordance with Article 34 of Directive 2014/25/EU. In practice this means that public undertakings providing services on markets that are exempt from public procurement rules will also be exempt from any the obligations under the PSI Directive insofar as their data are related to those services. In addition to this, the word 'considerable' has been deleted from Article 13(2a), which makes it slightly easier to exempt public undertakings from the requirement to release high value datasets for free. At the same time, the Council's modifications in Recital 22, which contain an important clarification of the general principle of re-use of the information held by public undertakings, have been retained. According to this principle, the decision whether or not to allow the re-use rests with the public undertakings themselves, except in situations where they are required to do so by national law, Union law, or the PSI Directive itself (as regards high value datasets).
3. **Research data**

Concerning the extension of the scope to research data, a reference that Member States should encourage compliance with the principle of 'open by default' has been added in Article 10(1), together with a reference to FAIR principles and the concept of research data being ‘as open as possible, as closed as necessary’.

4. **Charging**

The provisions on charging have remained unchanged compared with the Coreper mandate. This means that the Council's introduction of an exception to the principle of free availability of high value datasets has been retained in Article 13(2c), namely a possibility to delay implementation of this provision by up to 2 years for certain public sector bodies.

5. **Licences**

**Article 8** on standard licences has been slightly amended and now provides for a possibility to justify the use of a licence by a reference to a public interest objective. The remaining text of this article is unchanged and provides that licences should not be used to restrict re-use or competition.

6. **Dynamic data**

The provisions on dynamic data have remained unchanged compared with the Coreper mandate, including the Council's insertion of a provision on dynamic data in **Article 5(5)** ensuring that the obligation to make such data available via Application Programming Interfaces does not constitute a 'disproportionate effort', in particular for small public sector bodies.
7. **Other changes**

In addition to the above key components of the compromise, the following minor changes have been made in the text compared with the Coreper mandate:

- a new **Recital 41a** has been inserted specifying that the re-use of documents of public undertakings should not lead to market distortion and that fair competition should not be undermined;
- in **Recital 47a** a reference to the requirement to conduct data protection impact assessments in accordance with the GDPR has been added;
- in **Article 13(2)** there is additional text specifying that the impact assessment carried out prior to the establishment of a list of high value datasets in an implementing act should give special consideration to the competitive position of public undertakings concerned;
- the name of the category 'Companies' in the list of categories of high value datasets in the **Annex** has been changed to 'Companies and company ownership'.
III. CONCLUSION

1. The Presidency invites the Committee of the Permanent Representatives to:

a. endorse the annexed compromise text as agreed with the European Parliament in the trilogue, and

b. mandate the Presidency to inform the European Parliament that, should the European Parliament adopt its position at first reading, in accordance with Article 294 paragraph 3 of the Treaty, in the form set out in the compromise package contained in the Annex to this document (subject to revision by the lawyer linguists of both institutions), the Council would, in accordance with Article 294, paragraph 4 of the Treaty, approve the European Parliament’s position and the act shall be adopted in the wording which corresponds to the European Parliament’s position.
Proposal for
a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
on Open Data and the re-use of public sector information (recast)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 114 thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national parliaments,

Having regard to the opinion of the European Economic and Social Committee¹,

Having regard to the opinion of the Committee of the Regions²

Acting in accordance with the ordinary legislative procedure,

Whereas:

(1) Directive 2003/98/EC of the European Parliament and of the Council³ has been substantially amended. Since further amendments are to be made, that Directive should be recast in the interests of clarity.

(2) Pursuant to Article 13 of Directive 2003/98/EC and five years after the adoption of the amending Directive 2013/37/EU, the Commission has, after consulting the relevant stakeholders, undertaken an evaluation and review of the functioning of the Directive in the framework of a Regulatory Fitness and Performance Programme⁴.

¹ OJ C [...], […], p. […].
² OJ C […], […], p. […].
⁴ SWD(2018) 145.
(3) Following the stakeholder consultation and in the light of the Impact Assessment results, the Commission considered that action at Union level was necessary in order to address the remaining and emerging barriers to a wide re-use of public sector and publicly-funded information across the Union and to bring the legislative framework up to date with the advances in digital technologies, and further stimulate digital innovation, especially in Artificial Intelligence.

(4) The substantive changes introduced to the legal text so as to fully exploit the potential of public sector information for the European economy and society focus on the following areas: the provision of real-time access to dynamic data via adequate technical means, increasing the supply of high-value public data for re-use, including from public undertakings, research performing organisations and research funding organisations, tackling the emergence of new forms of exclusive arrangements, the use of exceptions to the principle of charging the marginal cost and the relationship between this Directive and certain related legal instruments, including Directive 96/9/EC\(^5\) and Directive 2007/2/EC of the European Parliament and of the Council\(^6\), Directive 2003/4/EC, Directive 2007/2/EC of the European Parliament and of the Council\(^7\) and Regulation (EU) 2016/679.

(4a) Access to information is a fundamental right. The Charter of Fundamental Rights of the European Union (the ‘Charter’) provides that everyone has the right to freedom of expression, including the right to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers.

---

(4b) Article 8 of the Charter of Fundamental Rights of the European Union guarantees the right to the protection of personal data and states that such data must be processed fairly for specified purposes and on the basis of the consent of the person concerned or some other legitimate basis laid down by law and under the control by an independent authority.

(5) The Treaty provides for the establishment of an internal market and of a system ensuring that competition in the internal market is not distorted. Harmonisation of the rules and practices in the Member States relating to the exploitation of public sector information contributes to the achievement of these objectives.

(6) The public sector in the Member States collects, produces, reproduces and disseminates a wide range of information in many areas of activity, such as social, political, economic, legal, geographical, environmental, weather, seismicity, tourist, business, patent and education. Documents produced by public sector bodies of executive, legislative or judicial nature constitute a vast, diverse and valuable pool of resources that can benefit society. Providing this information, which includes dynamic data, in a commonly-used electronic format allows citizens and businesses to find new ways to use them and create new, innovative products and services. Member States and public sector bodies may be able to benefit and receive adequate financial support from relevant Union funds and programmes, ensuring a wide use of digital technologies or the digital transformation of public administrations and public services, in their efforts to make data easily available for re-use.

(6a) Public sector information represent an extraordinary source of data that can contribute to improving the single market and to the development of new applications for consumers and businesses. Intelligent data usage, including their processing through Artificial Intelligence applications, can have a transformation effect on all sectors of the economy.
Directive 2003/98/EC of the European Parliament and of the Council of 17 November 2003 on the re-use of public sector information established a minimum set of rules governing the re-use and the practical means of facilitating re-use of existing documents held by public sector bodies of the Member States, including executive, legislative and judicial bodies. Since the adoption of the first set of rules on re-use of public sector information, the amount of data in the world, including public data, has increased exponentially and new types of data are being generated and collected. In parallel, there is a continuous evolution in technologies for analysis, exploitation and processing of data, such as machine learning, artificial intelligence and the internet of things. This rapid technological evolution makes it possible to create new services and new applications, which are built upon the use, aggregation or combination of data. The rules originally adopted in 2003 and later amended in 2013 no longer keep pace with these rapid changes and as a result the economic and social opportunities offered by re-use of public data risk being missed.

The evolution towards a data-based society, using data from different domains and activities, influences the life of every citizen in the Union, among other things, by enabling them to gain new ways of accessing and acquiring knowledge.

Digital content plays an important role in this evolution. Content production has given rise to rapid job creation in recent years and continues to do so. Most of these jobs are created by innovative start-ups and small- and medium sized enterprises (SMEs).
One of the principal aims of the establishment of an internal market is the creation of conditions conducive to the development of some services and products inside Member States and Union-wide. Public sector information or information collected, produced, reproduced, and disseminated within the exercise of a public task or a service of general interest, is an important primary material for digital content products and services and will become an even more important content resource with the development of advanced digital technologies, such as artificial intelligence, distributed ledger technologies and the internet of things. Intelligent data usage, including their processing through artificial intelligence applications, can have a transformational effect on all sectors of the economy. Broad cross-border geographical coverage will also be essential in this context. Wide possibilities of re-using such information should inter alia allow all European companies, including microenterprises and SMEs, as well as civil society, to exploit its potential and contribute to economic development and quality job creation and protection, especially to the benefit of local communities, and to important societal goals such as accountability and transparency.

Allowing re-use of documents held by a public sector body adds value for the re-users, for the end users and for society in general and in many cases for the public body itself, by promoting transparency and accountability and providing feedback from re-users and end users which allows the public sector body concerned to improve the quality of the information collected as well as the pursuit of its public tasks.

There are considerable differences in the rules and practices in the Member States relating to the exploitation of public sector information resources, which constitute barriers to bringing out the full economic potential of this key document resource. Practice in public sector bodies in exploiting public sector information continues to vary among Member States. That should be taken into account. Minimum harmonisation of national rules and practices on the re-use of public sector documents should therefore be undertaken, in cases where the differences in national regulations and practices or the absence of clarity hinder the smooth functioning of the internal market and the proper development of the information society in the Union.
Open data as a concept is generally understood to denote data in open formats that can be freely used, re-used and shared by anyone for any purpose. Open data policies which encourage the wide availability and re-use of public sector information for private or commercial purposes, with minimal or no legal, technical or financial constraints, and which promote the circulation of information not only for economic operators but primarily for the public, can play an important role in promoting social engagement, and kick-start and promote the development of new services based on novel ways to combine and make use of such information. Member States are therefore encouraged to promote the creation of data based on the principle of "open by design and by default", with regard to all documents falling in the scope of this Directive, while ensuring a consistent level of protection of public interest objectives, such as public security, including where sensitive information related to critical infrastructures are concerned; and while ensuring the protection of personal data, including where information in an individual data set may not present a risk of identifying or singling out a natural person, but when combined with other available information, could entail such risk.

Moreover, without minimum harmonisation at Union level, legislative activities at national level, which have already been initiated in a number of Member States in order to respond to the technological challenges, might result in even more significant differences. The impact of such legislative differences and uncertainties will become more significant with the further development of the information society, which has already greatly increased cross-border exploitation of information.
Member States have established re-use policies under Directive 2003/98/EC and some of them have been adopting ambitious open data approaches to make re-use of accessible public data easier for citizens and companies beyond the minimum level set by that Directive. Diverging rules in different Member States may act as a barrier to the cross-border offer of products and services and prevent comparable public data sets from being re-usable for pan-European applications based on them. Hence, a minimum harmonisation is required to determine what public data are available for re-use in the internal information market, consistent with and not affecting the relevant access regimes, both general and sectoral, such as the one defined by Directive 2003/4/EC of the European Parliament and of the Council on public access to environmental information. The provisions of Union and national law that go beyond these minimum requirements, notably in cases of sectoral legislation, should continue to apply. Examples of provisions that exceed the minimum harmonisation level of this Directive include lower thresholds for permissible charges for re-use than the thresholds foreseen in Article 6 or less restrictive licensing terms than those referred to in Article 8. Notably, this Directive should be without prejudice to provisions that exceed the minimum harmonisation level of this Directive as laid down in Commission delegated regulations adopted under Directive 2010/40/EU of the European Parliament and of the Council on the framework for the deployment of Intelligent Transport Systems in the field of road transport and for interfaces with other modes of transport.

Moreover, Members States are encouraged to go beyond the minimum requirements set by this Directive by applying its requirements to documents held by public undertakings related to activities which have been found, pursuant to Article 34 of Directive 2014/25, to be directly exposed to competition. Member States may also decide to apply the requirements of this Directive to private undertakings, in particular those that provide services of general interest.

---

(16) A general framework for the conditions governing re-use of public sector documents is needed in order to ensure fair, proportionate and non-discriminatory conditions for the re-use of such information. Public sector bodies collect, produce, reproduce and disseminate documents to fulfil their public tasks. Use of such documents for other reasons constitutes a re-use. Member States' policies can go beyond the minimum standards established in this Directive, thus allowing for more extensive re-use. When transposing this Directive, Member States can use other terms than 'documents', as long as the full scope of what is covered by the definition of the term 'document' in this Directive is maintained.

(17) This Directive should apply to documents the supply of which forms part of the public tasks of the public sector bodies concerned, as defined by law or by other binding rules in the Member States. In the absence of such rules the public tasks should be defined in accordance with common administrative practice in the Member States, provided that the scope of the public tasks is transparent and subject to review. The public tasks could be defined generally or on a case-by-case basis for individual public sector bodies.

(18) This Directive should apply to documents that are made accessible for re-use when public sector bodies license, sell, disseminate, exchange or give out information. To avoid cross-subsidies, re-use should include further use of documents within the organisation itself for activities falling outside the scope of its public tasks. Activities falling outside the public task will typically include supply of documents that are produced and charged for exclusively on a commercial basis and in competition with others in the market.
This Directive does not in any way restrict or impair the performance of the statutory tasks of public authorities and other public bodies. The Directive lays down an obligation for Member States to make all existing documents re-usable unless access is restricted or excluded under national rules on access to documents or subject to the other exceptions laid down in this Directive. The Directive builds on the existing access regimes in the Member States and does not change the national rules for access to documents. It does not apply in cases in which citizens or companies can, under the relevant access regime, only obtain a document if they can prove a particular interest. At Union level, Articles 41 (Right to good administration) and 42 (Right of access to documents) of the Charter of Fundamental Rights of the European Union recognise the right of any citizen of the Union and any natural or legal person residing or having its registered office in a Member State to have access to European Parliament, Council and Commission documents. Public sector bodies should be encouraged to make available for re-use any documents held by them. Public sector bodies should promote and encourage re-use of documents, including official texts of a legislative and administrative nature in those cases where the public sector body has the right to authorise their re-use.

The Member States often entrust the provision of services in the general interest with entities outside of the public sector while maintaining a high degree of control over such entities. At the same time, the provisions of the Directive 2003/98/EC apply only to documents held by public sector bodies, while excluding public undertakings from its scope. This leads to a poor availability for re-use of documents produced in the performance of services in the general interest in a number of areas, notably in the utility sectors. It also greatly reduces the potential for the creation of cross-border services based on documents held by public undertakings that provide services in the general interest.
(21) Directive 2003/98/EC should therefore be amended in order to ensure that its provisions can be applied to the re-use of existing documents produced in the performance of services in the general interest by public undertakings pursuing one of the activities referred to in Articles 8 to 14 of Directive 2014/25/EU of the European Parliament and of the Council\(^9\), as well as by public undertakings acting as public service operators pursuant to Article 2 of Regulation (EC) No 1370/2007 of the European Parliament and the Council on public passenger transport services by rail and by road, public undertakings acting as air carriers fulfilling public service obligations pursuant to Article 16 of Regulation (EC) No 1008/2008 of the European Parliament and of the Council of 24 September 2008 on common rules for the operation of air services in the Community, and public undertakings acting as Community shipowners fulfilling public service obligations pursuant to Article 4 of Regulation (EEC) No 3577/92 of 7 December 1992 applying the principle of freedom to provide services to maritime transport within Member States (maritime cabotage).

(22) This Directive should not contain a general obligation to allow the re-use of documents produced by public undertakings. The decision whether or not to authorise re-use should remain with the public undertaking concerned, except where otherwise required in accordance with this Directive, Union or national law. Only after the public undertaking has made a document available for re-use, should it observe the relevant obligations laid down in Chapters III, IV and V of this Directive, in particular as regards formats, charging, transparency, licences, non-discrimination and prohibition of exclusive arrangements. On the other hand, public undertakings are not required to comply with the requirements laid down in Chapter II, such as the rules applicable to processing of requests. When allowing the re-use of documents, particular attention should be given to the protection of critical infrastructure defined in accordance with Directive 2008/114/EC\(^10\) and of essential services defined in accordance with Directive (EU) 2016/1148\(^11\).

---

(23) The volume of research data generated is growing exponentially and has potential for re-use beyond the scientific community. In order to be able to address mounting societal challenges efficiently and in a holistic manner, it has become crucial and urgent to be able to access, blend and re-use data from different sources, as well as across sectors and disciplines. Research data includes statistics, results of experiments, measurements, observations resulting from fieldwork, survey results, interview recordings and images. It also includes meta-data, specifications and other digital objects. Research data is different from scientific articles reporting and commenting on findings resulting from their scientific research. For many years, the open availability and re-usability of scientific research data stemming from public funding has been subject to specific policy initiatives. Open access is understood as the practice of providing online access to research outputs free of charge for the end user and without restrictions on use and re-use beyond the possibility to require authorship to be acknowledged. Open access policies aim in particular to provide researchers and the public at large with access to research data as early as possible in the dissemination process and to facilitate its use and re-use. Open access helps enhance quality, reduce the need for unnecessary duplication of research, speed up scientific progress, combat scientific fraud, and it can overall favour economic growth and innovation. Beside open access, commendable efforts are currently being made to ensure that data management planning becomes a standard scientific practice and to support the dissemination of research data that are findable, accessible, interoperable and re-usable (FAIR principles).
(24) For the reasons explained above, it is appropriate to set an obligation on Member States to adopt open access policies with respect to publicly-funded research data and ensure that such policies are implemented by all research performing organisations and research funding organisations. Research performing organisations and research funding organisations could also be organised as public sector bodies and/or public undertakings. This Directive applies to such hybrid organisations only in their capacity as research performing organisations and to their research data. Open access policies typically allow for a range of exceptions from making scientific research results openly available. On 17 July 2012, the Commission adopted a Recommendation on access to and preservation of scientific information, updated on 25 April 2018\textsuperscript{12}, and describing, among other things, relevant elements of open access policies. Additionally, the conditions, under which certain research data can be re-used, should be improved. For this reason, certain obligations stemming from this Directive should be extended to research data resulting from scientific research activities subsidised by public funding or co-funded by public and private-sector entities. Under the national open access policies, publicly-funded research data should be made open as the default option. However, in this context, concerns in relation to privacy, protection of personal data, confidentiality, national security, legitimate commercial interests, such as trade secrets, and to intellectual property rights of third parties should be duly taken into account, according to the principle ‘as open as possible, as closed as necessary’. Moreover, research data which are excluded from access on the grounds of national security, defence or public security should not be covered by this Directive. In order to avoid any administrative burden, obligations stemming from this Directive should only apply to such research data that have already been made publicly available by researchers, research performing organisations or research funding organisations through an institutional or subject-based repository and should not impose extra costs for the retrieval of the datasets or require additional curation of data. Member States may extend the application of the Directive also to research data made publicly available through other data infrastructures than repositories, through open access publications, as an attached file to an article, a data paper or a paper in a data journal. Documents other than research data should continue to be exempt from the scope of application of this Directive.

\textsuperscript{12} C(2018)2375.

This Directive lays down a generic definition of the term ‘document’. The term ‘document’ also includes any part of it. It covers any representation of acts, facts or information — and any compilation of such acts, facts or information — whatever its medium (written on paper, or stored in electronic form or as a sound, visual or audiovisual recording). The definition of ‘document’ is not intended to cover computer programmes. Member States may extend the application of this Directive to computer programmes.

(27) Public sector bodies are increasingly making their documents available for re-use in a proactive manner, by ensuring online discoverability and actual availability of documents and associated metadata in open formats that can be machine-readable and that ensure interoperability, re-use and accessibility. Documents should also be made available for re-use following a request lodged by a re-user. In those cases, the time limit for replying to requests for re-use should be reasonable and in accordance with the equivalent time for requests to access the document under the relevant access regimes. Public undertakings, educational establishments, research performing organisations and research funding organisations should however be exempt from this requirement. Reasonable time limits throughout the Union will stimulate the creation of new aggregated information products and services at pan-European level. This is particularly important for dynamic data (including environmental data, traffic data, satellite data, weather data, sensor generated data), the economic value of which depends on the immediate availability of the information and of regular updates. Dynamic data should therefore be made available immediately after collection, or in case of a manual update immediately after the modification of the dataset, via an Application Programming Interface so as to facilitate the development of internet, mobile and cloud applications based on such data. Whenever this is not possible due to technical or financial constraints, public sector bodies should make the documents available in a timeframe that allows their full economic potential to be exploited. Specific measures should be taken in order to lift relevant technical and financial constraints. Should a licence be used, the timely availability of documents may be a part of the terms of the licence. Where data verification is essential in the light of justified public interest reasons, notably for public health and safety, dynamic data should be made available immediately after verification. Such essential verification should not affect the frequency of the updates.
(28) In order to get access to the data opened for re-use by this Directive, it is useful to ensure access to dynamic data through well-designed Application Programming Interfaces (APIs). An API means a set of functions, procedures, definitions and protocols for machine-to-machine communication and the seamless exchange of data. APIs should be supported by clear technical documentation that is complete and available online. Where possible, open APIs should be used. European or internationally recognised standard protocols should be applied and international standards for datasets should be used where applicable. APIs can have different levels of complexity and can mean a simple link to a database to retrieve specific datasets, a web interface, or more complex set-ups. There is general value in re-using and sharing data via a suitable use of APIs as this will help developers and start-ups to create new services and products. It is also a crucial ingredient of creating valuable ecosystems around data assets that are often unused. The set-up and use of API needs to be based on several principles: availability, stability, maintenance over lifecycle, uniformity of use and standards, user-friendliness as well as security. For dynamic data, meaning frequently updated data, often in real time, public sector bodies and public undertakings should make this available for re-use immediately after collection by ways of suitable APIs and, where relevant, as a bulk download, save for cases where this would impose a disproportionate effort. Assessment of the proportionality of the effort should take into account the size and operating budget of the public sector body or the public undertaking in question.
The possibilities for re-use can be improved by limiting the need to digitise paper-based documents or to process digital files to make them mutually compatible. Therefore, public sector bodies should make documents available in any pre-existing format or language, through electronic means where possible and appropriate. Public sector bodies should view requests for extracts from existing documents favourably when to grant such a request would involve only a simple operation. Public sector bodies should not, however, be obliged to provide an extract from a document or to modify the format of the requested information where this involves disproportionate effort. To facilitate re-use, public sector bodies should make their own documents available in a format which, as far as possible and appropriate, is not dependent on the use of specific software. Where possible and appropriate, public sector bodies should take into account the possibilities for the re-use of documents by and for persons with disabilities by providing the information in accessible formats in accordance with the requirements of the Web Accessibility Directive.15

To facilitate re-use, public sector bodies should, where possible and appropriate, make documents, including those published on websites, available through open and machine-readable formats and together with their metadata, at the best level of precision and granularity, in a format that ensures interoperability, e.g. by processing them in a way consistent with the principles governing the compatibility and usability requirements for spatial information under Directive 2007/2/EC of the European Parliament and of the Council.16

---

(31) A document should be considered to be in a machine-readable format if it is in a file format that is structured in such a way that software applications can easily identify, recognise and extract specific data from it. Data encoded in files that are structured in a machine-readable format should be considered to be machine-readable data. Machine-readable formats can be open or proprietary; they can be formal standards or not. Documents encoded in a file format that limits automatic processing, because the data cannot, or cannot easily, be extracted from them, should not be considered to be in a machine-readable format. Member States should where possible and appropriate encourage the use of European or internationally recognised open, machine-readable formats. The European Interoperability Solutions Framework should be taken into account, where applicable, when designing technical solutions for the re-use of documents.
(32) Charges for the re-use of documents constitute an important market entry barrier for start-ups and SMEs. Documents should therefore be made available for re-use without charges and, where charges are necessary they should in principle be limited to the marginal costs. Where public bodies carry out a particularly extensive search for requested information or extremely costly modifications of the format of requested information, either voluntarily or as required under national law, marginal costs may cover the costs associated with such activities. In exceptional cases, the necessity of not hindering the normal running of public sector bodies that are required to generate revenue to cover a substantial part of their costs relating to the performance of their public tasks should be taken into consideration. This also applies where a public sector body has made data available as open data but is obliged to generate revenue to cover a substantial part of their costs relating to the performance of other public tasks. The role of public undertakings in a competitive economic environment should also be acknowledged. In such cases, public sector bodies and public undertakings should therefore be able to charge above marginal costs. Those charges should be set according to objective, transparent and verifiable criteria and the total income from supplying and allowing re-use of documents should not exceed the cost of collection and production, including purchasing from third parties, reproduction, maintenance, storage and dissemination, together with a reasonable return on investment. Where applicable, the costs of anonymisation of personal data and costs of measures taken to protect the confidentiality of data may also be included in the eligible cost. Member States may require public sector bodies and public undertakings to disclose those costs. The requirement to generate revenue to cover a substantial part of the public sector bodies’ costs relating to the performance of their public tasks or the scope of the services of general interest entrusted with public undertakings does not have to be a legal requirement and may stem, for example, from administrative practices in Member States. Such a requirement should be regularly reviewed by the Member States.
(32a) The return on investment can be understood as a percentage, in addition to marginal costs, allowing for the recovery of the cost of capital and the inclusion of a real rate of return. As the cost of capital is closely linked to credit institutions' interest rates, themselves based on the ECB's fixed rate on main refinancing operations, the reasonable return on investment should not be more than 5% above the ECB's fixed interest rate.

(33) Libraries, museums and archives should be able to charge above marginal costs in order not to hinder their normal running. In the case of such public sector bodies the total income from supplying and allowing re-use of documents over the appropriate accounting period should not exceed the cost of collection, production, reproduction, dissemination, preservation and rights clearance, together with a reasonable return on investment. Where applicable, the costs of anonymisation of personal data or of commercially sensitive information should also be included in the eligible cost. For the purpose of libraries, museums and archives and bearing in mind their particularities, the prices charged by the private sector for the re-use of identical or similar documents could be considered when calculating a reasonable return on investment.

(34) The upper limits for charges set in this Directive are without prejudice to the right of Member States to apply lower charges or no charges at all.

(35) Member States should lay down the criteria for charging above marginal costs. In this respect, Member States, for example, may lay down such criteria in national rules or may designate the appropriate body or appropriate bodies, other than the public sector body itself, competent to lay down such criteria. That body should be organised in accordance with the constitutional and legal systems of the Member States. It could be an existing body with budgetary executive powers and under political responsibility.
Ensuring that the conditions for re-use of public sector documents are clear and publicly available is a pre-condition for the development of a Union-wide information market. Therefore all applicable conditions for the re-use of the documents should be made clear to the potential re-users. Member States should encourage the creation of indices accessible online, where appropriate, of available documents so as to promote and facilitate requests for re-use. Applicants for re-use of documents held by entities other than public undertakings, educational establishments, research performing organisations and research funding organisations should be informed of available means of redress relating to decisions or practices affecting them. This will be particularly important for SMEs and start-ups, which may not be familiar with interactions with public sector bodies from other Member States and corresponding means of redress.

The means of redress should include the possibility of review by an impartial review body. That body could be an already existing national authority, such as the national competition authority, the supervisory authority set up pursuant to Regulation (EU) 2016/67917, the national access to documents authority or a national judicial authority. That body should be organised in accordance with the constitutional and legal systems of Member States and should not prejudge any means of redress otherwise available to applicants for re-use. It should however be distinct from the Member State mechanism laying down the criteria for charging above marginal costs. The means of redress should include the possibility of review of negative decisions but also of decisions which, although permitting re-use, could still affect applicants on other grounds, notably by the charging rules applied. The review process should be swift, in accordance with the needs of a rapidly changing market.

---

(38) Making public all generally available documents held by the public sector — concerning not only the political process but also the legal and administrative process — is a fundamental instrument for extending the right to knowledge, which is a basic principle of democracy. This objective is applicable to institutions at every level, be it local, national or international.

(39) In some cases the re-use of documents will take place without a licence being agreed. In other cases a licence may be issued imposing conditions on the re-use by the licensee dealing with issues such as liability, the protection of personal data, the proper use of documents, guaranteeing non-alteration and the acknowledgement of source. If public sector bodies license documents for re-use, the licence conditions should be fair and transparent. Standard licences that are available online may also play an important role in this respect. Therefore Member States should provide for the availability of standard licences.

(40) If the competent authority decides to no longer make available certain documents for re-use, or to cease updating these documents, it should make these decisions publicly known, at the earliest opportunity, via electronic means whenever possible.

(41) Conditions for re-use should be non-discriminatory for comparable categories of re-use. This should, for example, not prevent the exchange of information between public sector bodies free of charge for the exercise of public tasks, whilst other parties are charged for the re-use of the same documents. Neither should it prevent the adoption of a differentiated charging policy for commercial and non-commercial re-use.

(41a) **Member States should in particular ensure that re-use of documents of public undertakings does not lead to market distortion and that fair competition is not undermined.**
(42) In relation to any re-use that is made of the document, public sector bodies may impose conditions, where appropriate through a licence, such as acknowledgment of source and acknowledgment of whether the document has been modified by the re-user in any way. Any licences for the re-use of public sector information should in any event place as few restrictions on re-use as possible, for example limiting them to an indication of source. Open licences in the form of standardised public licenses available online which allow data and content to be freely accessed, used, modified and shared by anyone for any purpose, and which rely on open data formats, should play an important role in this respect. Therefore, Member States should encourage the use of open licences that should eventually become common practice across the Union. Without prejudice to liability requirements, laid down in Union or national law, where a public sector body or a public undertaking makes documents available for re-use without any conditions and restrictions, that public sector body or public undertaking may be allowed to waive all liability with regards to the documents made available for re-use.

(43) Public sector bodies should respect competition rules when establishing the principles for re-use of documents avoiding as far as possible exclusive agreements between themselves and private partners. However, in order to provide a service of general economic interest, an exclusive right to re-use specific public sector documents may sometimes be necessary. This may be the case if no commercial publisher would publish the information without such an exclusive right. Public service excluded from the scope of Directive 2014/24/EU pursuant to Article 11 of that Directive and innovation partnerships as referred to in Article 31 of Directive 2014/24/EU should be taken into account.
(44) There are numerous cooperation arrangements between libraries, including university libraries, museums, archives and private partners which involve digitisation of cultural resources granting exclusive rights to private partners. Practice has shown that such public-private partnerships can facilitate worthwhile use of cultural collections and at the same time accelerate access to the cultural heritage for members of the public. It is therefore appropriate to take into account current divergences in the Member States with regard to digitisation of cultural resources, by a specific set of rules pertaining to agreements on digitisation of such resources. Where an exclusive right relates to digitisation of cultural resources, a certain period of exclusivity might be necessary in order to give the private partner the possibility to recoup its investment. That period should, however, be limited in time and as short as possible, in order to respect the principle that public domain material should stay in the public domain once it is digitised. The period of an exclusive right to digitise cultural resources should in general not exceed 10 years. Any period of exclusivity longer than 10 years should be subject to review, taking into account technological, financial and administrative changes in the environment since the arrangement was entered into. In addition, any public private partnership for the digitisation of cultural resources should grant the partner cultural institution full rights with respect to the post-termination use of digitised cultural resources.

(45) Arrangements between data holders and data re-users which do not expressly grant exclusive rights but which can reasonably be expected to restrict the availability of documents for re-use should be subject to additional public scrutiny. Therefore, the essential aspects of such arrangements should be published online at least two months before coming into effect, i.e. two months before the agreed date on which the performance of the obligations of the parties is set to begin. The publication should give interested parties an opportunity to request the re-use of the documents covered by the arrangement and prevent the risk of restricting the range of potential re-users. In any event, the essential aspects of such arrangements in their final form agreed by the parties should also be made public online without undue delay following their conclusion.
This Directive aims at minimising the risk of excessive first-mover advantage that could limit the number of potential re-users of the data. Where contractual arrangements may, in addition to the Member State's obligations under this Directive to grant documents, entail a transfer of Member State's resources within the meaning of Article 107(1) TFEU, this Directive should be without prejudice to the application of the State aid and other competition rules laid down in Articles 101 to 109 of the Treaty. It follows from the State aid rules laid down in Articles 107 to 109 of the Treaty that the State must verify ex ante whether State aid may be involved in the relevant contractual arrangement and ensure that they comply with State aid rules.

This Directive should not affect the protection of individuals with regard to the processing of personal data under the provisions of Union and national law, particularly under Regulation (EU) 2016/679 of the European Parliament and of the Council\(^18\) and Directive 2002/58/EC of the European Parliament and of the Council\(^19\) and including any supplementing provisions of law enacted by the Member States. This means, inter alia, that the re-use of personal data is only permissible if the principle of purpose limitation as set out in Article 5(1)b and Article 6 of the General Data Protection Regulation is met. Anonymous information is information which does not relate to an identified or identifiable natural person or to personal data rendered anonymous in such a manner that the data subject is not or no longer identifiable. Rendering information anonymous is a means to reconcile the interests in making public sector information as re-usable as possible with the obligations under data protection legislation, but comes at a cost. It is appropriate to consider this cost as one of the cost items to be considered as part of the marginal cost of dissemination as defined in Article 6 of this Directive.

\(^{18}\) Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation) […]

(47a) When taking decisions on the scope and conditions for the re-use of public sector documents containing personal data, for example in the health sector, data protection impact assessments may have to be performed in accordance with Article 35 of Regulation (EU) 2016/679.

(48) The intellectual property rights of third parties are not affected by this Directive. For the avoidance of doubt, the term ‘intellectual property rights’ refers to copyright and related rights only (including sui generis forms of protection). This Directive does not apply to documents covered by industrial property rights, such as patents, registered designs and trademarks. The Directive does not affect the existence or ownership of intellectual property rights of public sector bodies, nor does it limit the exercise of these rights in any way beyond the boundaries set by this Directive. The obligations imposed in accordance with this Directive should apply only insofar as they are compatible with the provisions of international agreements on the protection of intellectual property rights, in particular the Berne Convention for the Protection of Literary and Artistic Works (the Berne Convention), the Agreement on Trade-Related Aspects of Intellectual Property Rights (the TRIPS Agreement) and the WIPO Copyright Treaty (WCT). Public sector bodies should, however, exercise their copyright in a way that facilitates re-use.

(49) Taking into account Union law and the international obligations of Member States and of the Union, particularly under the Berne Convention and the TRIPS Agreement, documents for which third parties hold intellectual property rights should be excluded from the scope of this Directive. If a third party was the initial owner of the intellectual property rights for a document held by libraries, including university libraries, museums and archives and the term of protection of those rights has not expired, that document should, for the purpose of this Directive, be considered as a document for which third parties hold intellectual property rights.

(50) This Directive should be without prejudice to the rights, including economic and moral rights that employees of public sector bodies may enjoy under national rules.
(51) Moreover, where any document is made available for re-use, the public sector body concerned should retain the right to exploit the document.

(52) Tools that help potential re-users to find documents available for re-use and the conditions for re-use can facilitate considerably the cross-border use of public sector documents. Member States should therefore ensure that practical arrangements are in place that help re-users in their search for documents available for re-use. Assets lists, accessible preferably online, of main documents (documents that are extensively re-used or that have the potential to be extensively re-used), and portal sites that are linked to decentralised assets lists are examples of such practical arrangements. Member States should also facilitate long-term availability for re-use of public sector information, in line with the applicable preservation policies.

(52a) The Commission should facilitate the cooperation among Member States and support the design, testing, implementation and deployment of interoperable electronic interfaces that will enable more efficient and secure public services.

(53) This Directive is without prejudice to Directive 2001/29/EC of the European Parliament and of the Council. It spells out the conditions within which public sector bodies can exercise their intellectual property rights in the internal information market when allowing re-use of documents. Where public sector bodies are holders of the right provided for in Article 7(1) of Directive 96/9/EC, they should not exercise that right in order to prevent re-use or to restrict the re-use of existing documents beyond the limits set by this Directive.

(54) The Commission has supported the development of an online Open Data Maturity Report with relevant performance indicators for the re-use of public sector information in all the Member States. A regular update of this report will contribute to the exchange of information between the Member States and the availability of information on policies and practices across the Union.
(55) It is necessary to ensure that the Member States monitor the extent of the re-use of public sector information, the conditions under which it is made available and the redress practices.

(56) The Commission may assist the Member States in implementing this Directive in a consistent way by issuing and updating existing guidelines, particularly on recommended standard licences, datasets and charging for the re-use of documents, after consulting interested parties.

(57) One of the principal aims of the establishment of the internal market is the creation of conditions conducive to the development of Union-wide services. Libraries, museums and archives hold a significant amount of valuable public sector information resources, in particular since digitisation projects have multiplied the amount of digital public domain material. These cultural heritage collections and related metadata are a potential base for digital content products and services and have a huge potential for innovative re-use in sectors such as learning and tourism. Other types of cultural establishments (such as orchestras, operas, ballets and theatres), including the archives that are part of those establishments, should remain outside the scope because of their ‘performing arts’ specificity and the fact that almost all of their material is subject to third-party intellectual property rights and would therefore remain outside the scope of that Directive.

(58) In order to set in place conditions supporting the re-use of documents which is associated with important socio-economic benefits having a particular high value for economy and society, a list of thematic categories of high value datasets is included in the Annex. By way of illustration, and without prejudice to the implementing acts identifying the high value datasets to which the specific requirements set out in this Directive apply, taking into account the Commission Notice 2014/C 240 01 (Guidelines on datasets, licensing and charging for the reuse of documents), the thematic categories listed in the Annex could inter alia cover postcodes, national and local maps (Geospatial), energy consumption and satellite images (Earth observation and environment), in situ data from instruments and weather forecasts (Meteorological), demographic and economic indicators (Statistics), business registers and registration identifiers (Companies and company ownership), road signs and inland waterways (Mobility).
(58aa) The power to adopt acts in accordance with Article 290 of the Treaty on the Functioning of the European Union should be delegated to the Commission in order to amend the list of thematic categories for high value datasets in the Annex by adding new thematic categories of high value datasets. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level, and that those consultations be conducted in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making. In particular, to ensure equal participation in the preparation of delegated acts, the European Parliament and the Council receive all documents at the same time as Member States' experts, and their experts systematically have access to meetings of Commission expert groups dealing with the preparation of delegated acts.
An EU-wide list of datasets with a particular potential to generate socio-economic benefits together with harmonised re-use conditions constitutes an important enabler of cross-border data applications and services. In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission to support the re-use of documents associated with important socio-economic benefits by adopting a list of specific high-value datasets to which specific requirements of this Directive apply, along with the modalities of their publication and re-use. Consequently, those specific requirements will not apply prior to the adoption by the Commission of implementing acts. The list should take into account sectoral Union legislation that already regulates the publication of datasets, as well as the categories indicated in the Technical Annex of the G8 Open Data Charter and in the Commission's Notice 2014/C 240/01. In preparing the list, the Commission should carry out appropriate consultations, including at expert level. Moreover, when deciding on the inclusion in the list of data held by public undertakings or on their free availability, the effects on competition in the respective markets should be taken into account. The implementing acts should take into account sectoral Union legislation, such as Directive 2007/2/EC and Directive 2010/40/EU, to ensure that datasets are made available under corresponding standards and sets of metadata. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council.

In view of ensuring their maximum impact and to facilitate re-use, the high-value datasets should be made available for re-use with minimal legal restrictions and at no cost. They should also be published via Application Programming Interfaces. However, this does not preclude public sector bodies from charging for services that they provide in relation to the high value datasets in their exercise of public authority, in particular certifying the authenticity or veracity of documents.

Since the objectives of this Directive, namely to facilitate the creation of Union-wide information products and services based on public sector documents, to ensure the effective cross-border use of public sector documents on the one hand by private companies, particularly by small and medium-sized enterprises, for added-value information products and services, and on the other hand by citizens to facilitate the free circulation of information and communication, cannot be sufficiently achieved by the Member States but can rather, by reasons of the pan-European scope of the proposed action, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

This Directive respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union, including the right to privacy (Article 7), the protection of personal data (Article 8) the right to property (Article 17) and the integration of persons with disabilities (Article 26). Nothing in this Directive should be interpreted or implemented in a manner that is inconsistent with the European Convention for the Protection of Human Rights and Fundamental Freedoms.

The European Data Protection Supervisor delivered an Opinion 5/2018 on 10 July 2018 pursuant to Article 41(2) of Regulation (EC) 45/2001.

The Commission should carry out an evaluation of this Directive. Pursuant to paragraph 22 of the Interinstitutional Agreement between the European Parliament, the Council of the European Union and the European Commission on Better Law-Making of 13 April 2016, that evaluation should be based on the five criteria of efficiency, effectiveness, relevance, coherence and EU value added and should provide the basis for impact assessments of possible further measures.

---

(64) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive amendment as compared to the earlier Directives. The obligation to transpose the provisions which are unchanged arises under the earlier Directives.

(65) This Directive should be without prejudice to the obligations of the Member States relating to the time-limit for the transposition into national law of the Directives set out in Annex I, Part B.

HAVE ADOPTED THIS DIRECTIVE:
CHAPTER I

GENERAL PROVISIONS

Article 1

Subject matter and scope

1. In order to promote the use of open data and stimulate innovation in products and services, this Directive establishes a minimum set of rules governing the re-use and the practical means of facilitating re-use of:

(a) existing documents held by public sector bodies of the Member States;

(c) research data, pursuant to conditions set out in Article 10.

2. This Directive shall not apply to:

(a) documents the supply of which is an activity falling outside the scope of the public task of the public sector bodies concerned as defined by law or by other binding rules in the Member State, or in the absence of such rules, as defined in line with common administrative practice in the Member State in question, provided that the scope of the public tasks is transparent and subject to review;

(b) documents held by public undertakings:
   – produced outside the scope of the provision of services in the general interest as defined by law or other binding rules in the Member State;
   – related to the activities directly exposed to competition and therefore, pursuant to Article 34 of Directive 2014/25/EU, not subject to procurement rules;

(c) documents for which third parties hold intellectual property rights;

(d) documents, such as sensitive data, which are excluded from access by virtue of the access regimes in the Member States, including on the grounds of:
   – the protection of national security (that is to say, State security), defence, or public security,
   – statistical confidentiality,
   – commercial confidentiality (including business, professional or company secrets);

(da) documents access to which is excluded or restricted on the grounds of protection of sensitive critical infrastructure information as defined in point (d) of Article 2 of Directive 2008/114/EC;

(e) documents access to which is restricted by virtue of the access regimes in the Member States, including cases whereby citizens or companies have to prove a particular interest to obtain access to documents;
(f) logos, crests and insignia;

g) documents access to which is excluded or restricted by virtue of the access regimes on the grounds of protection of personal data, and parts of documents accessible by virtue of those regimes which contain personal data the re-use of which has been defined by law as being incompatible with the law concerning the protection of individuals with regard to the processing of personal data or as undermining the protection of privacy and the integrity of the individual, in particular in accordance with Union or national legislation regarding the protection of personal data;

(h) documents held by public service broadcasters and their subsidiaries, and by other bodies or their subsidiaries for the fulfilment of a public service broadcasting remit;

(i) documents held by cultural establishments other than libraries, university libraries, museums and archives;

(j) documents held by educational establishments of secondary level and below and, in case of all other educational establishments, documents other than those referred to in Article 1(1)(c);

(k) documents other than those referred to in Article 1(1)(c) held by research performing organisations and research funding organisations, including organisations established for the transfer of research results.

3. This Directive builds on and is without prejudice to national and Union access regimes.

4. The obligations imposed in accordance with this Directive shall apply only insofar as they are compatible with the provisions of international agreements on the protection of intellectual property rights, in particular the Berne Convention, the TRIPS Agreement and the WIPO Copyright Treaty (WCT).

5. The right for the maker of a database provided for in Article 7(1) of Directive 96/9/EC shall not be exercised by public sector bodies in order to prevent the re-use of documents or to restrict re-use beyond the limits set by this Directive.

6. This Directive governs the re-use of existing documents held by public sector bodies and public undertakings of the Member States, including documents to which Directive 2007/2/EC of the European Parliament and of the Council\(^\text{28}\) applies.

**Article 2**

**Definitions**

For the purpose of this Directive the following definitions shall apply:

1. ‘public sector body’ means the State, regional or local authorities, bodies governed by public law and associations formed by one or several such authorities or one or several such bodies governed by public law;

2. ‘body governed by public law’ means any body:

   (a) established for the specific purpose of meeting needs in the general interest, not having an industrial or commercial character; and

---

(b) having legal personality; and

(c) financed, for the most part by the State, or regional or local authorities, or other bodies governed by public law; or subject to management supervision by those bodies; or having an administrative, managerial or supervisory board, more than half of whose members are appointed by the State, regional or local authorities or by other bodies governed by public law;

3. 'public undertaking' means any undertaking active in the areas set out in Article 1 (1) (b) over which the public sector bodies may exercise directly or indirectly a dominant influence by virtue of their ownership of it, their financial participation therein, or the rules which govern it.

A dominant influence on the part of the public sector bodies shall be presumed in any of the following cases in which those bodies, directly or indirectly:

(a) hold the majority of the undertaking’s subscribed capital;

(b) control the majority of the votes attaching to shares issued by the undertaking;

(c) can appoint more than half of the undertaking’s administrative, management or supervisory body.

4. ‘university’ means any public sector body that provides post-secondary-school higher education leading to academic degrees;

4b. 'standard license' means a set of predefined re-use conditions in a digital format, preferably compatible with standardised public licences available online;

5. ‘document’ means:

(a) any content whatever its medium (written on paper or stored in electronic form or as a sound, visual or audiovisual recording);

(b) any part of such content;
5b. ‘anonymisation’ means the process of changing information into anonymous information which does not relate to an identified or identifiable natural person or personal data rendered anonymous in such a manner that the data subject is not or no longer identifiable;

6. 'dynamic data' means documents in a digital form, subject to frequent or real-time updates, in particular because of their volatility or rapid obsolescence; data generated by sensors are typically considered as dynamic data;

7. 'research data' means documents in a digital form, other than scientific publications, which are collected or produced in the course of scientific research activities and are used as evidence in the research process, or are commonly accepted in the research community as necessary to validate research findings and results;

8. ‘high value datasets' means documents the re-use of which is associated with important benefits for society, the environment and the economy, notably because of their suitability for the creation of value-added services, applications and new, quality and decent jobs, and the number of potential beneficiaries of the value-added services and applications based on these datasets;

9. ‘re-use’ means the use by persons or legal entities of:

(a) documents held by public sector bodies, for commercial or non-commercial purposes other than the initial purpose within the public task for which the documents were produced, except exchange of documents between public sector bodies purely in pursuit of their public tasks;

(b) documents held by public undertakings, for commercial or non-commercial purposes other than the initial purpose of providing services in the general interest for which the documents were produced, except exchange of documents between public undertakings and public sector bodies purely in pursuit of the public tasks of public sector bodies.

9a. ‘personal data’ means data as defined in point (a) of Article 4 of Regulation (EU) 2016/679;

10. ‘machine-readable format’ means a file format structured so that software applications can easily identify, recognize and extract specific data, including individual statements of fact, and their internal structure;
11. ‘open format’ means a file format that is platform-independent and made available to the public without any restriction that impedes the re-use of documents;

12. ‘formal open standard’ means a standard which has been laid down in written form, detailing specifications for the requirements on how to ensure software interoperability;

13. ‘reasonable return on investment’ means a percentage of the overall charge, in addition to that needed to recover the eligible costs, not exceeding 5 percentage points above the fixed interest rate of the European Central Bank;

14. ‘third party’ means any natural or legal person other than a public sector body or a public undertaking that holds the data.

Article 3

General principle

1. Subject to paragraph 2 Member States shall ensure that documents to which this Directive applies in accordance with Article 1 shall be re-usable for commercial or non-commercial purposes in accordance with the conditions set out in Chapters III and IV.

2. For documents in which libraries, including university libraries, museums and archives hold intellectual property rights and for documents held by public undertakings, Member States shall ensure that, where the re-use of such documents is allowed, these documents shall be re-usable for commercial or non-commercial purposes in accordance with the conditions set out in Chapters III and IV.
CHAPTER II

REQUESTS FOR RE-USE

Article 4

Processing of requests for re-use

1. Public sector bodies shall, through electronic means where possible and appropriate, process requests for re-use and shall make the document available for re-use to the applicant or, if a licence is needed, finalise the licence offer to the applicant within a reasonable time that is consistent with the time-frames laid down for the processing of requests for access to documents.

2. Where no time limits or other rules regulating the timely provision of documents have been established, public sector bodies shall process the request and shall deliver the documents for re-use to the applicant or, if a licence is needed, finalise the licence offer to the applicant as soon as possible or, at the latest, within a timeframe of not more than 20 working days after its receipt. This timeframe may be extended by another 20 working days for extensive or complex requests. In such cases the applicant shall be notified as soon as possible, and in any case within three weeks after the initial request that more time is needed to process it and of the reasons for it.

3. In the event of a negative decision, the public sector bodies shall communicate the grounds for refusal to the applicant on the basis of the relevant provisions of the access regime in that Member State or of the national provisions adopted pursuant to this Directive, in particular points (a) to (g) of Article 1(2) or Article 3. Where a negative decision is based on point (c) of Article 1(2), the public sector body shall include a reference to the natural or legal person who is the rightholder, where known, or alternatively to the licensor from which the public sector body has obtained the relevant material. Libraries, including university libraries, museums and archives shall not be required to include such a reference.
4. Any decision on re-use shall contain a reference to the means of redress in case the applicant wishes to appeal the decision. The means of redress shall include the possibility of review by an impartial review body with the appropriate expertise, such as the national competition authority, the relevant access to documents authority, a Supervisory Authority set up in accordance with Regulation (EU) 2016/679 or a national judicial authority, whose decisions are binding upon the public sector body concerned.

4a. For the purposes of this Article, Member States shall define practical arrangements to facilitate effective re-use of documents. These arrangements may in particular include the modalities of supplying adequate information on the rights provided for in this Directive and offering relevant assistance and guidance.

5. The following entities shall not be required to comply with the requirements of this Article:

(a) public undertakings;

(b) educational establishments, research performing organisations and research funding organisations.
CHAPTER III
CONDITIONS FOR RE-USE

Article 5

Available formats

1. Without prejudice to Chapter V, public sector bodies and public undertakings shall make their documents available in any pre-existing format or language, and, where possible and appropriate, in forms or formats that are open, machine-readable, accessible, findable and reusable by electronic means, together with their metadata. Both the format and the metadata shall, where possible, comply with formal open standards.

1a. Member States shall encourage public sector bodies and public undertakings to produce and make available documents falling within the scope of this Directive according to the principle of "open by design and by default".

2. Paragraph 1 shall not imply an obligation for public sector bodies to create or adapt documents or provide extracts in order to comply with that paragraph where this would involve disproportionate effort, going beyond a simple operation.

3. On the basis of this Directive, public sector bodies cannot be required to continue the production and storage of a certain type of documents with a view to the re-use of such documents by a private or public sector organisation.

4. Public sector bodies shall make dynamic data available for re-use immediately after collection, via suitable Application Programming Interfaces (APIs) and, where relevant, as a bulk download.
5. Where making available documents immediately after collection would exceed the financial and technical capacities of the public sector body, thereby imposing a disproportionate effort, documents referred to in paragraph 4 shall be made available for re-use in a timeframe or with temporary technical restrictions that do not unduly impair the exploitation of their economic and social potential.

5aa. Paragraphs 1 to 5 shall apply to existing documents of public undertakings which are available for re-use.

5b. High value datasets, the list of which shall be defined in accordance with Article 13, shall be made available for re-use in machine-readable form, via suitable Application Programming Interfaces (APIs) and, where relevant, as a bulk download.

Article 6

Principles governing charging

1. Re-use of documents shall be free of charge.

   However, the recovery of the marginal costs incurred for the reproduction, provision and dissemination of documents as well as for anonymisation of personal data and measures taken to protect commercially confidential information may be allowed.

2. By way of exception, paragraph 1 shall not apply to the following:

   (a) public sector bodies that are required to generate revenue to cover a substantial part of their costs relating to the performance of their public tasks;

   (b) libraries, including university libraries, museums and archives;

   (c) public undertakings.

2a. Member States shall publish online a list of public sector bodies referred to in point (a) of paragraph (2).
3. In the cases referred to in points (a) and (c) of paragraph 2, the total charges shall be calculated according to objective, transparent and verifiable criteria to be laid down by the Member States. The total income from supplying and allowing re-use of documents over the appropriate accounting period shall not exceed the cost of their collection, production, reproduction, dissemination and data storage, together with a reasonable return on investment, and – where applicable – anonymisation of personal data and measures taken to protect commercially confidential information. Charges shall be calculated in line with the applicable accounting principles.

4. Where charges are made by the public sector bodies referred to in point (b) of paragraph 2, the total income from supplying and allowing re-use of documents over the appropriate accounting period shall not exceed the cost of collection, production, reproduction, dissemination, data storage, preservation and rights clearance and – where applicable – anonymisation of personal data and measures taken to protect commercially confidential information, together with a reasonable return on investment. Charges shall be calculated in line with the accounting principles applicable to the public sector bodies involved.

5. The re-use of high value datasets, the list of which shall be defined in accordance with Article 13, and of research data referred to in point (c) of Article 1(1) shall be free of charge for the user.

5a. Paragraph 5 shall not apply to the re-use of specific high-value datasets exempted in accordance with Article 13(2a).
**Article 7**

**Transparency**

1. In the case of standard charges for the re-use of documents, any applicable conditions and the actual amount of those charges, including the calculation basis for such charges, shall be pre-established and published, through electronic means where possible and appropriate.

2. In the case of charges for the re-use other than those referred to in paragraph 1, the factors that are taken into account in the calculation of those charges shall be indicated at the outset. Upon request, the holder of documents in question shall also indicate the way in which such charges have been calculated in relation to the specific re-use request.

3. Public sector bodies shall ensure that applicants for re-use of documents are informed of available means of redress relating to decisions or practices affecting them.

**Article 8**

**Standard licences**

1. **Re-use of documents shall not be subject to conditions, unless such conditions are justified by a general interest objective.** Re-use of documents shall not be subject to conditions, unless such conditions are objective, proportionate, non-discriminatory and justified by a public interest objective.

   **When re-use is subject to conditions,** those conditions shall not unnecessarily restrict possibilities for re-use and shall not be used to restrict competition.

2. In Member States where licences are used, Member States shall ensure that standard licences for the re-use of public sector documents, which can be adapted to meet particular licence applications, are available in digital format and can be processed electronically. Member States shall encourage the use of such standard licences.
**Article 9**

**Practical arrangements**

1. Member States shall make practical arrangements facilitating the search for documents available for re-use, such as asset lists of main documents with relevant metadata, accessible where possible and appropriate online and in machine-readable format, and portal sites that are linked to the asset lists. Where possible Member States shall facilitate the cross-linguistic search for documents, in particular by enabling metadata aggregation at Union level.

Member States shall also encourage public sector bodies to make practical arrangements facilitating the preservation of documents available for re-use.

1a. Member States shall, in cooperation with the Commission, continue efforts to simplify access to datasets, in particular by providing a single point of access and by progressively making available suitable datasets from public sector bodies with regard to all documents to which this Directive applies as well as to data from Union institutions, in formats that are accessible, readily findable and re-usable by electronic means.

**Article 10**

**Research data**

1. Member States shall support the availability of research data by adopting national policies and relevant actions aiming at making publicly funded research data openly available ('open access policies') following the principle of open by default and compatible with FAIR principles. In this context, concerns relating to intellectual property rights, personal data protection and confidentiality, security and legitimate commercial interests, shall be taken into account in accordance with the principle “as open as possible, as closed as necessary”. These open access policies shall be addressed to research performing organizations and research funding organizations.
2. Research data shall be re-usable for commercial or non-commercial purposes under the conditions set out in Chapters III and IV, insofar as they are publicly funded and researchers, research performing organisations or research funding organisations have already made them publicly available through an institutional or subject-based repository. In this context, legitimate commercial interests, knowledge transfer activities and pre-existing intellectual property rights shall be taken into account. This provision shall be without prejudice to point (c) of Article 1(2).

CHAPTER IV

NON-DISCRIMINATION AND FAIR TRADING

Article 11

Non-discrimination

1. Any applicable conditions for the re-use of documents shall be non-discriminatory for comparable categories of re-use, including for cross-border re-use.

2. If documents are re-used by a public sector body as input for its commercial activities which fall outside the scope of its public tasks, the same charges and other conditions shall apply to the supply of the documents for those activities as apply to other users.
Article 12

Exclusive arrangements

1. The re-use of documents shall be open to all potential actors in the market, even if one or more market actors already exploit added-value products based on these documents. Contracts or other arrangements between the public sector bodies or public undertakings holding the documents and third parties shall not grant exclusive rights.

2. However, where an exclusive right is necessary for the provision of a service in the public interest, the validity of the reason for granting such an exclusive right shall be subject to regular review, and shall, in any event, be reviewed every three years. The exclusive arrangements established after the entry into force of this Directive shall be made publicly available online at least two months before their coming into effect. The final terms of such arrangements shall be transparent and made publicly available online.

This paragraph shall not apply to digitisation of cultural resources.

3. Notwithstanding paragraph 1, where an exclusive right relates to digitisation of cultural resources, the period of exclusivity shall in general not exceed 10 years. In case where that period exceeds 10 years, its duration shall be subject to review during the 11th year and, if applicable, every seven years thereafter.

The arrangements granting exclusive rights referred to in the first subparagraph shall be transparent and made public.

In the case of an exclusive right referred to in the first subparagraph, the public sector body concerned shall be provided free of charge with a copy of the digitised cultural resources as part of those arrangements. That copy shall be available for re-use at the end of the period of exclusivity.
4. Legal or practical arrangements that, without expressly granting an exclusive right, aim at or could reasonably be expected to lead to a restricted availability for re-use of documents by entities other than the third party participating in the arrangement, shall be made publicly available online at least two months before their coming into effect. The effect of such legal or practical arrangements on the availability of data for re-use shall be subject to regular reviews and shall, in any event, be reviewed every three years. The final terms of such arrangements shall be transparent and made publicly available online.

5. Exclusive arrangements existing on 17 July 2013 that do not qualify for the exceptions under paragraphs 2 and 3 and which were entered into by public sector bodies shall be terminated at the end of the contract or in any event not later than 18 July 2043.

Exclusive arrangements existing on the entry into force of this Directive that do not qualify for the exceptions under paragraphs 2 and 3 and which were entered into by public undertakings shall be terminated at the end of the contract or in any event not later than or 30 years after the entry into force of this Directive.
CHAPTER V

HIGH VALUE DATASETS

Article 13

High value datasets and modalities of publication and re-use

1. In order to set in place conditions supporting the re-use of high value datasets, a list of thematic categories of such datasets is set out in Annex.

The Commission shall be empowered to adopt delegated acts in accordance with Article 14 in order to amend the Annex by adding new thematic categories of high value datasets in view of reflecting technological and market developments.

1a. The Commission shall adopt implementing acts laying down a list of specific high value datasets belonging to the categories set out in Annex and held by public sector bodies and public undertakings among the documents to which this Directive applies, which shall be available for free, machine-readable, provided via APIs and, where relevant, as a bulk download.

The implementing acts may also specify the modalities of the publication and re-use of high value datasets which shall be compatible with open standard licences. They may include terms applicable to re-use, formats of data and metadata and technical modalities of dissemination. Investments made by the Member States in open data approaches, such as investments into the development and roll-out of certain standards, shall be taken into account and weighed up against the potential benefits from inclusion in the list.

Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 14a (2).
2. The identification of specific high value datasets pursuant to paragraph (1a) shall be based on the assessment of their potential to generate important socio-economic or environmental benefits, innovative services, the high number of users, in particular SMEs, the revenues they may help generate, and their potential for being combined with other datasets. The Commission shall to that end carry out appropriate consultations, including at expert level, conduct an impact assessment and ensure complementarity with existing legal acts, such as Directive 2010/40/EU of the European Parliament and of the Council, with respect to the re-use of documents. The impact assessment shall include a cost-benefit analysis and an analysis of whether providing high value datasets free of charge by public sector bodies that are required to generate revenue to cover a substantial part of their costs relating to the performance of their public tasks would lead to a substantial impact on the budget of such bodies. Where high value datasets held by public undertakings are concerned, the impact assessment shall give special consideration to the role of public undertakings in a competitive economic environment.

2a. By way of exception, the implementing acts referred to in paragraph (1a), shall provide that the availability of high value datasets for free shall not apply to specific high-value datasets of public undertakings if making those datasets available for free would lead to a considerable distortion of competition in the respective markets.

2b. The availability of high value datasets for free shall not apply to libraries, including university libraries, museums and archives.

2c. Where making high value datasets available for free by public sector bodies that are required to generate revenue to cover a substantial part of their costs relating to the performance of their public tasks would lead to a substantial impact on the budget of the bodies involved, Member State may exempt those bodies from the requirement to make these high value datasets available for free for a duration that shall not exceed 2 years following the entry into force of the implementing act.
CHAPTER VI

FINAL PROVISIONS

Article 14

Committee procedure

1. The Commission shall be assisted by the Committee on Open Data and the Re-Use of Public Sector Information. That committee shall be a committee within the meaning of Regulation (EU) No 182/2011.

2. Where reference is made to this paragraph, Article 5 of Regulation (EU) No 182/2011 shall apply.

Article 14a

Exercise of the delegation

1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.

2. The power to adopt delegated acts referred to in Article 13 shall be conferred on the Commission for a period of five years from [date of entry into force of the Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration, unless the European Parliament or the Council opposes such extension not later than three months before the end of each period.
3. The delegation of power referred to in Article 13 may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.

4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.

5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.

6. A delegated act adopted pursuant to Article 13 shall enter into force only if no objection has been expressed either by the European Parliament or the Council within a period of three months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by three months at the initiative of the European Parliament or of the Council.

Article 15

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 2 years from entry into force. They shall immediately communicate the text of those measures to the Commission.
When Member States adopt those measures, they shall contain a reference to this Directive or shall be accompanied by such a reference on the occasion of their official publication. They shall also include a statement that references in existing laws, regulations and administrative provisions to the Directives repealed by this Directive shall be construed as references to this Directive. Member States shall determine how such reference is to be made and how that statement is to be formulated.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

*Article 16*

**Evaluation**

1. No sooner than four years after the date of transposition of this Directive, the Commission shall carry out an evaluation of this Directive and present a Report on the main findings to the European Parliament, the Council and the European Economic and Social Committee. Member States shall provide the Commission with the information necessary for the preparation of that Report.

2. The evaluation shall in particular address the scope and the social and economic impact of this Directive, including the extent of the increase in re-use of public sector documents to which this Directive applies, especially by SMEs, the impact of the high-value datasets, the effects of the principles applied to charging and the re-use of official texts of a legislative and administrative nature, the re-use of documents held by other entities than public sector bodies, the availability and the use of APIs, the interaction between data protection rules and re-use possibilities, as well as further possibilities of improving the proper functioning of the internal market, supporting economic and labour market development.
Article 17

Repeal

Directive 2003/98/EC, as amended by the Directive listed in Annex I, Part A, is repealed with effect from [day after the date in the first subparagraph of Article 15(1)], without prejudice to the obligations of the Member States relating to the time-limits for the transposition into national law and the date of application of the Directives set out in Annex I, Part B.

References to the repealed Directive shall be construed as references to this Directive and shall be read in accordance with the correlation table in Annex II.

Article 18

Entry into force

This Directive shall enter into force on the twentieth day following that of its publication in the Official Journal of the European Union.

Article 19

Addressees

This Directive is addressed to the Member States.

Done at Brussels,

For the European Parliament

For the Council

The President

The President
ANNEX

List of thematic categories of high value datasets:

1. Geospatial

2. Earth observation and environment

3. Meteorological

4. Statistics

5. Companies and company ownership

6. Mobility
