Conclusions on preparedness and response in the event of a CBRN attack

3043rd JUSTICE and HOME AFFAIRS Council meeting
Brussels, 8 and 9 November 2010

The Council adopted the following conclusions:

"THE COUNCIL

ACKNOWLEDGING that attacks by terrorist groups with chemical, biological, radiological and nuclear materials (CBRN) would have major consequences for people, property and the environment, requiring a coordinated and multidisciplinary response by the public authorities;

ACKNOWLEDGING the interest of certain terrorist organisations in the use of CBRN products or agents as well as their public announcement that they aim to recruit CBRN scientists;

NOTING that it is first and foremost the responsibility of the Member States to protect the population against CBRN incidents, and that initiatives at EU level must be taken in accordance with the principles of subsidiarity, proportionality and solidarity as well as in accordance with the relevant EU legislation, including in the area of chemical or biological safety. At Union level, preference is to be given, as far as possible, to non-legislative solutions.

RECALLING that on 20 December 2002 the Council and the Commission jointly adopted a programme to improve cooperation in the EU for preventing and limiting CBRN terrorist threats¹; and that the programme was revised and supplemented by the EU Solidarity Programme on the consequences of terrorist threats and attacks adopted by the Council on 2 December 2004², which emphasised the importance of reinforcing preparedness and the ability to manage the consequences of an attack by improving mutual assistance capabilities, training, exercises and coordination;

RECALLING that the Commission’s Green Paper on bio-preparedness published in July 2007\(^3\) increased awareness of CBRN risks and threats and launched a process of consultation at European level on how to reduce biological risks and enhance preparedness and response in the context of an all-hazards approach, including the terrorist threat; recalling also that in its conclusions of 6 December 2007 on addressing CBRN risks and on bio-preparedness\(^4\) the Council opened the way to an approach which took account of all CBRN risks of natural or man-made origin, including those relating to potential terrorist use of CBRN substances;

HAVING REGARD TO the inventory of EU CBRN instruments relevant for addressing prevention, preparedness and response to biological risks in the areas of human health (including occupational health and safety), animal and plant health, police, research, environment, and civil protection, noted by the Council in June 2008\(^5\);

RECALLING that the Council conclusions of 27 November 2008 on the creation of a CBRN database invited Europol to develop a European CBRN database in which to gather and centralise technical information on CBRN terrorism-related events and CBRN products and materials which may be used with malicious intent\(^6\);

RECALLING that the Stockholm programme\(^7\) highlights the importance of global and efficient management of disasters by the EU and of reinforcement of the Union's capacity to prevent disasters; that CBRN security policy must be relevant and efficient to improve the protection of the EU citizens against incidents with CBRN materials;

RECALLING the Council conclusions of 30 November 2009 on a Community framework on disaster prevention within the EU, which called for a comprehensive and consistent Community disaster prevention framework or strategy contributing to a multi hazard approach to the EU’s disaster management policy and also sought to minimise the potential adverse consequences and the impact of acts of terrorism\(^8\);

NOTING the report of the second round of peer evaluation on preparedness and consequence management in the event of a terrorist attack, and more particularly the recommendation concerning the drawing up of generic plans for crisis management\(^9\);

---

\(^9\) 8568/10 ENFOPOL 98 PROCIV 47
RECALLING the Commission communication on strengthening CBRN security in the European Union;\(^{10}\)

RECALLING the work of the CBRN Task Force launched in February 2008, with a view to preparing a list of measures that could be undertaken at EU level and in the Member States in order to lower the risks of terrorist acts using CBRN materials, and considering the outcome of the conference on enhancing CBRN security, held in Prague in the Czech Republic on 29 and 30 January 2009, and the report of the CBRN Task Force;

CONSIDERING that the EU CBRN Action Plan\(^ {11}\) includes actions concerning prevention, detection, preparedness and response and that one of its main objectives is to improve the planning of emergency measures;

CONSIDERING that preparedness is one of the essential elements of an efficient response to a CBRN threat or attack; that making emergency and intervention plans to react to that risk is one of the key elements of that response;

NOTING that the sharing of information between the Member States on their national plans provides added value, both for the improvement of the plans themselves and for cooperation between Member States in the event of cross-border terrorist acts;

HIGHLIGHTING that it is essential that each Member State carry out such planning in order to determine the responsibilities of the competent authorities, to draw up strategic objectives, to take adequately into account generic scenarios for CBRN risks, including those relating to terrorist acts and terrorism threat assessments, to agree on operational procedures (including on detection and analysis methods) and to plan a public communication policy;

RECALLING that risk and threat evaluation in this area is closely related to the putting in place of planning instruments;

CONSIDERING that some Member States have specific preparedness and response plans to deal with terrorist threats or attacks involving CBRN materials; and that some others have emergency plans to deal with terrorist threats or attacks (including response to CBRN threats or attacks), specific plans for radiological or nuclear risks, general emergency plans with an all-hazards approach, or specific procedures to deal with attacks involving CBRN materials.

INVITES THE MEMBER STATES
– to ensure that the CBRN risk is properly incorporated into their emergency response planning, in particular by taking its possible terrorist origins into account;
– to integrate the different elements of the response when drawing up such plans (especially police, intelligence, rescue, health, communication);
– to take the requirements of possible criminal investigations and forensics adequately into account in those plans;
– to ensure the implementation of the CBRN emergency response planning through appropriate simulation exercises;
– to exchange information and best practices with other Member States concerning their CBRN emergency intervention and response planning;
– to examine any problems raised by the Member States during the preparation and implementation of CBRN planning which require action at European level;
– to raise awareness on CBRN risks and appropriate action among the population in the event of an attack.
